GOODS ELEVATOR – 2T - 3,2mx2,2m – 6m – 1m

Developed and manufactured for the glass industry, this goods elevator without embarked personnel TPT 4000 is driven by a PLC that controls the full sequence including the lifting and lowering between two (2) levels and the activation of all installed safety features.

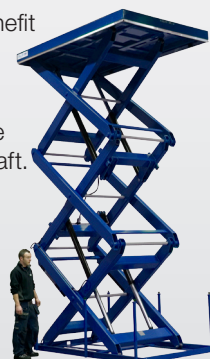

It is equipped with hydraulic locking pins, secured doors, safety lights, aluminium tear plate and a safety frame. The PLC offers a maintenance mode that allows trained technicians to do the routine maintenance operations and/or manually activate all safety features.

This goods elevator is mainly used to ease up internal logistic flows of raw material at an European R&D center of one of the main glass producer.

By investing into this goods elevator with a capacity of 2000 kg, equipped with a 3.5mx2.2m platform, you'll benefit from a lifting stroke of 6m and a closed height of 1m.

Since the PLC and the hydraulic power pack is placed remote, the lift operates completely silent. (Power pack: 70dB) The 2850kg heavy scissor lift has a platform divided in 3 pieces. This to be able to enter the narrow opening of the shaft and placed into the pit. 4 guides ensures an accurate and safe movement in the shaft.

Feel free to contact us for further information about potential modification that would suit the specifications of your project.

K14317 TPT 4000 GOODS ELEVATOR CHARACTERISTICS

TPT 4000

Capacity: kg	Length platform mm	Width platform mm	Lifting stroke mm	Closed height mm	Hydraulic powerpack	Lift time sec	Voltage VAC	Power kW	Ctrl voltage VDC	IP	Certificate
2000	3500	2200	6000	1000	Remote	104	3-380	5,5	24	54	CE, Directive Machine et EMC

Security devices: Hydraulic locking pins, secured doors with interlocks, flashing lights during operation, safety frame, maintenance mode for individual device control
